

**PRESS RELEASE****Date: June 2015****Franke extends its popular Maris extractor hood range with two new models**

Franke has extended its popular Maris extractor hood range with two new models, the award-winning and energy efficient Maris Plus and the easy to install Maris Built Under ceiling hood, offering wider design scope.

The Maris Plus is an updated model from the previous Maris Hood. It features a brushless motor and LED lighting, giving it an A+ energy rating and earning it Franke's 'Greenline' status for energy efficiency. The stylish hood is manufactured in black glass and available in three sizes of 60, 80 and 90cm. It features a digital display and three speed settings and its ghost controls, which are not visible when the hood is turned off, add to its smooth and streamlined aesthetics.

It is one of the few hoods on the market where air can be extracted directly through the rear of the unit, removing the need for ducting if the installation allows. Alternatively, it can be mounted on a wall without a chimney for use in re-circulatory mode. The Maris Plus won a Red Dot Award in 2015 for design and innovation.

The Maris Built Under ceiling hood has been specifically designed with ease of installation in mind, featuring a 'plug and play' system which allows for fitting to be completed in under 15 minutes. The stainless steel hood with a white glass base creates a 'floating on air' appearance once installed. The unobtrusive hood operates in re-circulatory mode only, so is ideal for use in any kitchen where ducting is not possible. It features three speed settings and comes with a remote control for ease of use.

The Maris Plus and Maris Built Under both feature low energy comfort lights to provide a more ambient light in the kitchen. They also both include an 'intense' speed setting for short, powerful bursts to remove unpleasant odours quickly and efficiently. The extractor hoods come with a two year Franke guarantee for peace of mind.
