PRESS RELEASE

TO BE RELEASED IMMEDIATELY

A600 – Everything For the Perfect Coffee

With its ingenious Swiss technology, the newly developed A600 from Franke Coffee Systems facilitates preparation of individual drinks of the highest quality. The touchscreen with intuitive operation opens up new dimensions of interaction with customers and service personnel. This is something that makes it possible for the A600 to take efficient drink service to the next level.

Endless innovation efforts undertaken by Franke Coffee Systems come together in the new A600. The needs of restaurateurs as well as coffee roasters and enthusiasts were all given equal consideration in development.

Intelligent Service Mode

The touchscreen with crystal clear resolution offers intuitive menu navigation, thus further enhancing the user's ability to provide efficient drink service. A selection of drinks can be assembled individually on the touchscreen, which is arranged to optimally meet the challenges of the large orders that restaurateurs may have to handle every day. While in service mode, personnel can enter in a number of different drink requests simultaneously and the A600 will just carry on making drink after drink. This relieves the pressure on the service team and ensures that full capacity is reached.

Self-Service Made Easy

Self-service is also a breeze with the A600's intelligent touchscreen. Here the guest can order from an attractive drink menu, which the restaurateur has filled with his or her own creations displayed using large images. Selecting a drink is as easy as child's play and it is just as easy to

choose additional options such as cup size or flavors using the simple touch or request movements. The user interface also displays advertising messages and screen savers, further enhancing attractiveness and making it possible to score additional sales.

Coffee Enjoyment With Impeccable Quality

Extraction is the decisive factor in coffee preparation. In this step the most important thing is to get the most out of the beans. Using ingenious methods and Swiss technology, Franke Coffee Systems has also optimized the new A600 in this arena. The perfectly synchronized system of ceramic grinder, patented brewing unit, and high-performance dispensing devices (milk system, flavor station, cup warmer) ensure the best coffee quality possible. As far as handling is concerned, components such as the easily accessible bean container with a shape that ensures optimal bean feed into the machine, the manually removable brewing unit chosen specifically for the customer from a selection of three designs, or the perfect froth quality of the milk systems are all perfectly matched to the needs of the restaurateur.

Easy Control

The newly developed LED light concept not only gives the central display a stylish visual ambiance, but also conveys function notices such as "refill bean hopper or milk" or "empty coffee grounds". Furthermore, with its automatic, HACCP-compliant cleaning concept, the FoamMaster also provides maximum assistance to the user by way of its integrated cleaner cartridge. Not only that, but all important components such as coffee grounds container, milk tank, or cleaning cartridge are all accessible from the front and easy to remove.
