

Franke presents "Mythos 2gether" at EuroCucina 2018

The highest energy efficiency class for an exclusive double pack

With "Mythos 2gether", Franke is presenting an induction stove top with integrated range hood that meets the highest energy efficiency class, A+++, at EuroCucina 2018. The Swiss kitchen specialist is thus supplementing its exclusive Mythos product family with an additional high-quality kitchen component with which customers can take a big step closer to their own personal dream kitchen.

With Mythos, Franke has an exclusive product family in its portfolio that offers an even balance between distinctive design and sophisticated functionality. This high standard is also met by the current new addition to the collection: Mythos 2gether. The state-of-the-art induction stove top with integrated range hood not only fulfills ambitious design requirements but also impresses with the highest energy efficiency class on the market, A+++. The hood integrated in the stove top is an extremely compact and thus space-saving solution.

For an optimum extraction of the cooking fumes, the extractor module is positioned in the middle of the rear area of the induction stove top. For the flush-mounted cover grille, the choice fell to cast iron: a visually striking, authentic material that is practically indestructible. This also allows heavy pots and pans to be moved from one cooking zone to the next – even sometimes roughly in hectic situations – without having to lift them.

Cast iron can also be excellently and quickly cleaned – a further reason why this material is the perfect solution for the combination of minimalistic elegance with the highest functionality. Like the cover grille of the extractor module, the frameless induction stove top with its black glass ceramics can be installed flush – creating a seamless combination with the adjacent kitchen furnishings.

Mythos 2gether is the result of many years of experience and development work at Franke. Numerous other high-tech solutions complement the modern kitchen aesthetics of the product. Three of the four total cooking zones can be adapted flexibly to various cooking requirements. The induction stove top or the stove top hood is operated directly on the glass via a discreet touch panel with white LEDs. Automatic functions with preset cooking and power stages such as the melting stage (42°C), heating-up (70°C) and boiling stage (90°C) make everyday cooking easier as does the automatic pan detection and hood activation. In addition, all electronic components are water-tight – in case any unforeseen "flooding" occurs during cooking.

A special feature of the "Mythos 2gether" induction stove top is the cover grille of the integrated flush-mounted stove top hood. It is made of cast iron and is therefore completely resistant to scratches and shocks.
