1. Insert faucet body into sink with o-ring between the body and deck.
2. Mount rubber washer followed by plastic base, if necessary (for series FH 300, FHBP 600), and metal washer to faucet shank under sink. Mount lock nut to shank and tighten.
3. Install the spout (for series FH 300) and rotate to the left and right, noting where it stops.
4. Insert handles according to attached list.
5. Connect the supply hoses (for series FH 400, FHBP 600) to the hot and cold water supply valves. Be sure to hold the supply hoses in place when tightening the nut so as not to twist the hoses. For series FH 300, from under side of sink connect the hot and cold water supply by flexible connector directly to the shank (flexible connectors not supplied).
6. Be sure the faucet is aligned properly. Make final tightening of lock nut.
7. For series FH 300, 400, 600 with side spray:
   a. Place spray holder through hole in sink, attach mounting nut and tighten securely.
   b. Connect hardpiping to hose, using the rubber and plastic washer.
   c. Thread hose through the spray head holder and attach end of hose of hose to the outlet hose. Be sure to remove plug from outlet hose. Caution: Hose will leak if washers are installed incorrectly.
8. Confirm that faucet operating handle is in closed position and open supply valves, check connections for leakage.

Use only clean water or very diluted soapy water with all finishes. Do not use any abrasive cleaners.
