

FRANKE

Instant boiling water on tap

WATER YOUR WAY

Maris Water Hub

Franke - inspiring excellence every day

Founded in 1911, Franke has a reputation for excellence in the world of home solutions. Known for our relentless pursuit of innovation, we have embraced both challenges and opportunities throughout the years - continually pushing the boundaries of what is possible, while at the same time inspiring everyday wellbeing.

Future-focused innovation

By integrating technology into kitchen systems, Franke create products that ensure maximum convenience every day; products that can be enjoyed for years.

Smart features such as automation, connectivity, and energy resource management ensure that every appliance helps to elevate the culinary experience with minimal environmental impact, thanks to the use of sustainable materials and eco-friendly manufacturing processes.

Plus, Franke also lead the way when it comes to providing water conservation and purification solutions designed to support a healthier future for all.

Everyday elegance

Every Franke home solution is meticulously designed; seamlessly combining form and function to create products that are both outstandingly practical and exceptionally stylish - bringing even more elegance to every home environment.

A welcome addition to the family

Drawing on Franke's extensive experience in taps, the next generation Maris Water Hub delivers a range of impressive features and benefits.

It's available in 3-in-1 and 4-in-1 configurations. Choose either the mechanical or electronic Maris Water Hub Tap and you'll get cold, hot and 100°C instant boiling water on demand. By selecting the electronic version, you'll also get the option to upgrade to the 4-in-1 configuration using the additional filtration kit - adding fresh, clean, filtered water on tap, whenever needed.

The benefits of instant boiling water

Whether you're preparing meals or making drinks, having true 100°C instant boiling water available at the touch of a tap can really help to save time and streamline processes in the kitchen.

Whether that means making pasta faster or a cup of tea in no time, this could give you more time to enjoy with your family and friends. Plus, because you'll no longer need a kettle, adding a Maris Water Hub to your home can help to save space on your kitchen worktops.

Standout stunning finishes

Available in a choice of Chrome, Matt Black or Decor Steel finishes both the Maris Water Hub Mechanical and Electronic designs look stunning, in any kitchen setting. And whilst the taps really stand out, the Maris Hub's tank fits discreetly under the sink.

Made of high-quality stainless steel and featuring exceptional thermal insulation plus smart technology, it ensures you can always have access to the water you want, instantly and economically.

Less energy used, less impact on the environment

One major benefit of using an instant boiling water tap over a traditional kettle is the significant amount of energy you could save. With an Energy Class A rating, switching to the Maris Water Hub could help lessen your impact on the environment. A small change for a meaningful difference.

Get fresh, filtered water straight from the tap

With the Maris Electronic tap it's also possible to get filtered water by fitting an additional Filtration Kit to the 3-in-1 system which upgrades it to offer 4-in-1 functionality.

Why is it worth doing this? Because water quality can vary depending on area.

Utilising Franke's premium Pro M filter, the upgraded Maris Water Hub ensures supreme water quality. The filter removes pesticides, chlorine, microplastics (up to 5 μm), rust and also any harmful contaminants, while at the same time retaining healthy minerals. This helps to ensure that the water you and your family rely on every day tastes better, and is also much healthier.

What's more, by reducing limescale the Pro M filter can help to protect the longevity of your Maris Water Hub's tank. Plus, the filter is as easy to change as a lightbulb and should only need replacing every 6 to 12 months, depending on the water hardness in your area.

Maris Electronic

Electronic tap

Single lever mixing tap with fixed spout
Electronic operation
Child safe push-and-turn control
Tube-in-tube construction
Spout rotation 180°
Spout reach 222mm
0/90° lever movement for installation close to the wall

Say goodbye to buying bottled water and create your 4-in-1 Maris Water Hub

There's no getting away from it. Every bottle of water we consume contributes to the ever-growing problem of single use plastic waste. Then there's the further impact of transporting bottled water from source to store.

Plus, there's the expense that comes from having to buy bottled water, week in, week out. And once you've got those heavy, bulky bottles back home, there's the added problem of it taking up valuable space in your cabinets or fridge.

But with filtered water from your Maris Water Hub, you won't have to worry about any of these things – a win for the environment and for you too.

Installation video
How to install the Maris Water Hub with filtration Kit (for filtered water function).

4-in-1 Filtration Kit

Mechanical or Electronic – which tap is for you?

Maris Water Hub 3-in-1 Electronic tap

The 3-in-1 Electronic design is easy and safe to use, thanks to the child-safe electronic control.

Simply push the electronic control to activate, turn and select either the boiling or filtered water function by the colours shown and push and hold to start the water flow. Then once you have the amount of water you need, just release the control.

Alternatively, after selecting the boiling water function, push the control twice for a continuous water flow of 30 seconds (around 1L) or three times for 1 minute (around 2L). The water flow will stop automatically.

Whilst in filtered mode, a double push will deliver 15 seconds of continuous flow and a triple push will give 30 seconds of water. Again, after which time, the flow will stop automatically.

See opposite page for the additional Filtration Kit needed to convert your 3-in-1 Maris Electronic tap into a 4-in-1 tap.

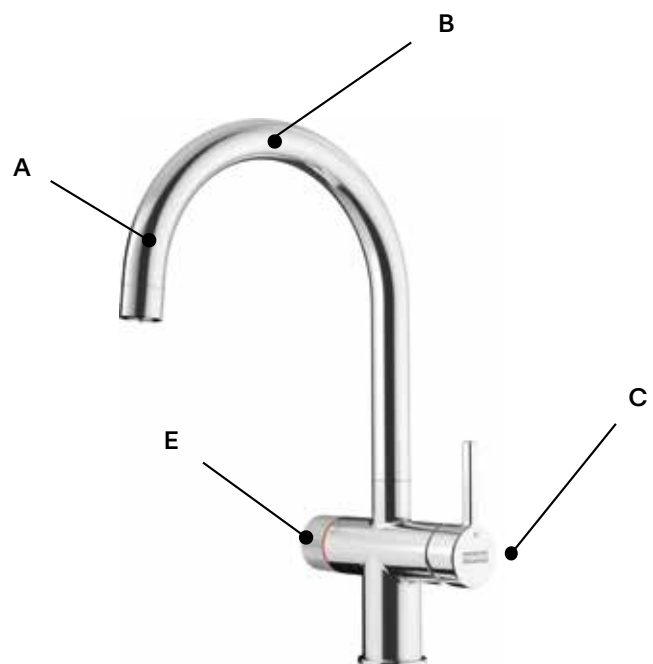

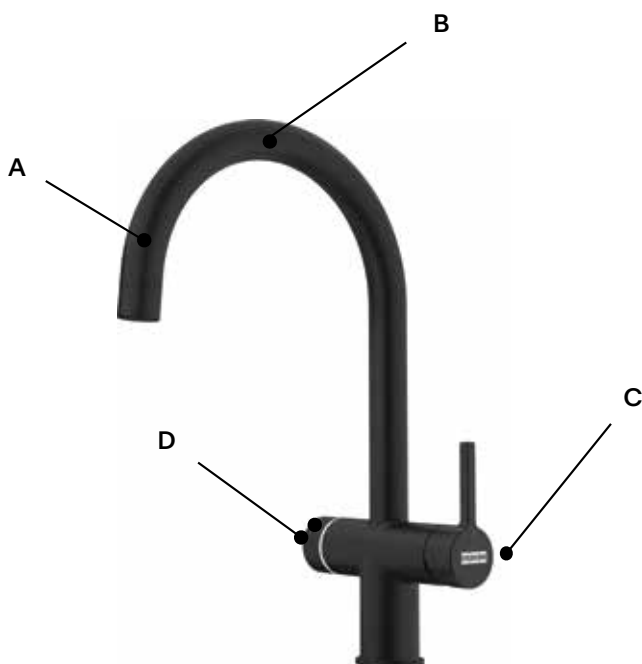

Maris Water Hub 3-in-1 Mechanical tap

Simple and safe to use, thanks to the pull-and-turn mechanical control, which allows instant boiling water to flow effortlessly. Then once the control is released, the tap stops automatically when you release the control, making it super easy to operate.

In addition, there is a continuous flow function. To activate this, first pull the control and while turned to operation mode, push it until locked. Then, to stop the flow, pull the control again and turn it to off mode.

- A Tube-in-tube construction
- B 180° spout rotation
- C 0/90° movement for installation close to the wall
- Eco-Cartridge with water and energy saving
- D Child safe pull-and-turn electronic control
- E Child safe pull-and-turn mechanical control

Accessories

Pro M Filter

The filter provided with the 3-in-1 Maris Water Hub prevents limescale formation in the tank, removes substances while preserving minerals in the water. Easy to replace, the Pro M Filter must be changed every 6 to 12 months, depending on water hardness in your area - you can check this by contacting us or your local water authority.

Warm Water Support (optional)

If you do not have mains hot water, for example if you have a gravity-fed system, you can use the Warm Water Support component to blend the boiling water from the tank with your mains cold feed, in order to provide up to 55°C warm water.
