

FRANKE

VARIVENT

EXHAUST CONTROL

Cutting-edge Vision AI technology makes VariVent smarter than ever, wirelessly detecting cooking events and adjusting exhaust levels in real-time to reduce energy usage and cost. Existing systems can't match it for accuracy.

Varivent Exhaust Control

Smarter Control

Varivent 2.0 utilizes Patent Pending Vision AI Technology to precisely determine real-time cooking loads and rapidly optimizes exhaust fan speeds.

Improved Air Balance

The VariVent smart controller also signals the Kitchen HVAC system to adjust make-up air supply, creating more balanced air circulation.

Energy Savings

The smart controller reduces exhaust rates during low volume or idle periods, substantially slashing heating and cooling costs.

Simple, Clutter-Free Installation

Unlike systems using wired heat or optical sensors, VariVent installs quickly and easily. Periodic duct cleaning will go easier, as well, without the risk of damaging or pulling out sensors.

Adaptability

The Vision AI camera, mounted outside of the hood, adapts to your specific appliances and watches for exact cooking portions, improving its accuracy and efficiency.
